PROFILE

I'm a third-year IT student who leans red-team and spends as much time building security tooling as studying it. Cybersecurity and data analytics are my focus, and I learn best by shipping real things rather than filling in templates. On a recent one-month WIL placement with Momentum Metropolitan's Group Technology Security team, I built an internal AI risk-research agent and a pipeline that runs automated code review on every merge request. Outside of work, I sharpen my offensive skills on HackTheBox and TryHackMe: network exploitation, privilege escalation, and web vulnerabilities. What I'm after next is a role where I can actually contribute, not watch from the sidelines.

TECHNICAL SKILLS

LANGUAGES	SECURITY TOOLS	DATA & ANALYTICS	OPS & PLATFORM
Python	Nmap · Metasploit	Pandas · NumPy	Linux (Ubuntu/Debian)
Java	Burp Suite · OWASP ZAP	scikit-learn	Git · GitLab CI/CD
C++	Wireshark	Matplotlib · Plotly	Docker
Bash	John the Ripper · Hashcat	ELK Stack · Kibana	Power Automate · MS Graph
SQL	Gobuster · ffuf	Grafana	Ollama / LLM tooling
JavaScript			

WORK EXPERIENCE

Security Engineering Intern (WIL)

2026 · 1-month programme

Momentum Metropolitan, Group Technology Security, Centurion

- **Software Guardian:** internal AI risk-research agent. Owned the prompt engineering and implementation architecture, and specified a least-privilege Power Automate + Microsoft Graph build with POPIA-conscious usage logging.
- **ai-review-platform:** a six-stage GitLab CI/CD pipeline that runs headless LLM code review on merge requests (54 tests passing), hardened against poisoned-pipeline execution. Reviewed weekly with the team manager.

Sales Consultant

Apr 2024 – Jan 2025

Vape Vendors, Pretoria

- Ran the point-of-sale system, handling over 100 transactions a day with near-perfect accuracy.
- Maintained the inventory database for 500+ products, keeping stock accuracy above 95%.
- Acted as first point of contact for the store's computer and software issues to keep systems running.

PROJECTS

Security Pre-Commit Scanner

github.com/hexwrk/security-pre-commit-scanner

Python · Git Hooks · YAML · Ollama · DevSecOps

- A Git pre-commit hook that scans staged code for exposed credentials, SQL injection, unsafe commands, and weak cryptography before anything reaches the repository.
- Now at V2: added a local Ollama (qwen2.5-coder:14b) AI triage layer over the original regex engine to cut false positives, plus a multi-language rules.yaml so teams can add detections without touching the core.

Security Log Analyzer

github.com/hexwrk/log-analyzer

Python · Pandas · ELK Stack · Kibana

- Works through 10,000+ log entries to surface attack patterns, spikes in failed logins, and other signs of unusual activity.
- Uses Pandas for offline correlation, the ELK Stack for ingestion, and Kibana to plot events on a timeline for fast triage.

devlog

github.com/hexwrk/devlog

Python · Desktop App

- A desktop to-do app for IT learners that tracks labs, CTFs, projects, and skills in one place.

EDUCATION & TRAINING

BSc Information Technology

2024 – Present (Year 3)

Richfield Graduate Institute of Technology, Centurion

- Focus areas: Cybersecurity and Data Analytics.

Practical Cybersecurity Training

2024 – Present

TryHackMe (Furios) · HackTheBox (hexwrk) · Self-directed

- Offensive security practice: network exploitation, privilege escalation, web vulnerabilities, password cracking, and CTF challenges.
- Self-study across data analytics, machine learning, exploit development, and red-team technique.

National Senior Certificate (Matric)

2023

Hoërskool Waterkloof, Pretoria

- Matric Exemption (Bachelor Degree admission).
